Archaea, Bacteria, and Viruses

Although bacteria and viruses are both too small to be seen without a microscope, they're as different as giraffes and goldfish. Bacteria are relatively complex, single-celled creatures, many with...

Bacterial vs. Viral Infections: The Differences Explained

Viruses are the smallest and simplest life form known. They are 10 to 100 times smaller than bacteria. The biggest difference between viruses and bacteria is that viruses must have a living host - like a plant or animal - to multiply, while most bacteria can grow on non-living surfaces.

Bacteria vs Virus - Difference and Comparison | Diffen

Viruses typically have spherical (polyhedral), rod-shaped, or helically shaped capsids. Some viruses, such as bacteriophages, have complex shapes which include the addition of a protein tail attached to the capsid with tail fibers extending from the tail. Viruses are much smaller than bacteria.
